

User Acceptance Test Report - aTendy Attendance App

Engineer: Lev Karavanov

Execution date: 22/04/2026

Environment: Local frontend <http://localhost:5173>, backend <http://localhost:8081>, PostgreSQL local demo DB; teacher and student accounts tested

1. Sign in as teacher and student and verify role-based access

Preconditions: Teacher and student accounts exist in the system

Step	Action	Expected System Response	Pass / Fail	Comment
1	Open the login page	Login form is shown	pass	Login page opened successfully.
2	Enter teacher credentials and submit	Redirected to teacher dashboard	pass	Teacher account redirected to /teacher/dashboard.
3	Log out	Returned to the login page	pass	Sign out returned to login page.
4	Enter student credentials and submit	Redirected to student dashboard	pass	Student account redirected to /student/dashboard.
5	As student, attempt to open a teacher-only page	Access is denied / redirected	pass	Student was redirected away from teacher route.

Post-condition: Each role can access only its own pages.

2. Create a course and lecture as teacher

Preconditions: Teacher is signed in

Step	Action	Expected System Response	Pass / Fail	Comment
1	Navigate to the Courses page	Course list is shown	pass	Courses page loaded successfully and displayed existing courses.
2	Click 'Create course' and fill the form	Course form accepts input	pass	Course creation form accepted name and description.
3	Submit the course form	Course is created and appears in the list	pass	Created course appeared in the course list.
4	Click the icon 'Start lecture'	Lecture form is shown	pass	Create lecture dialog opened from course actions.
5	Fill the lecture details and submit	Lecture dashboard is shown	pass	Fresh lecture was created and redirected to lecture dashboard.

Post-condition: Course and lecture exist in the system.

3. Mark attendance as student using the lecture code

Preconditions: Student is enrolled to the course and signed in; Teacher has shared a valid active lecture code

Step	Action	Expected System Response	Pass / Fail	Comment
1	Click 'Enter code'	Lecture-code input is shown	pass	Mark Attendance dialog opened from student dashboard.
2	Enter the lecture code	Code is accepted by the form	pass	Fresh active lecture code was accepted by the input field.
3	Submit the form	'Attendance marked' message is shown	pass	System displayed attendance marked confirmation and updated dashboard counters.

Post-condition: Attendance record is stored for the student.

4. Open attendance-related pages and verify data is shown correctly

Preconditions: At least one attendance record exists

Step	Action	Expected System Response	Pass / Fail	Comment
1	Student opens the attendance History	List of records is shown	pass	History page opened and displayed attendance-related information.

Step	Action	Expected System Response	Pass / Fail	Comment
2	Teacher opens Lectures page	All lectures are shown	pass	Lectures page showed existing lectures and join codes.
3	Teacher clicks 'view dashboard' for a specific lecture	Present students list is shown	pass	Lecture dashboard displayed attendance statistics and present student list.

Post-condition: Attendance data is displayed for teacher and student flows.

5. Create a course in English and verify that an English translation row is stored

Preconditions: Teacher is signed in; UI locale is set to English

Step	Action	Expected System Response	Pass / Fail	Comment
1	Open the course creation form	Form is shown in English	pass	Course creation form opened in English.
2	Enter the course name and description in English	Input is accepted	pass	English course name and description were accepted.
3	Submit the form	Course is saved successfully	pass	Course was saved and appeared in the list.
4	Query the course list / database	An English translation row exists for the course	pass	Course data was available in English after creation.

Post-condition: An English translation row is persisted for the new course.

6. Add the same course in Russian and verify that the Russian version can be retrieved

Preconditions: Course from test 5 exists with an English translation

Step	Action	Expected System Response	Pass / Fail	Comment
1	Open the course edit page	Edit form is shown	pass	Edit form opened for the created course.
2	Switch the locale selector to Russian	Russian input fields are displayed	pass	UI switched to Russian labels.
3	Enter the Russian name and description	Input is accepted	pass	Russian Cyrillic course name and description were accepted.
4	Submit the form	Russian translation row is saved	pass	Russian text was saved.
5	Request the course with locale = ru	Course data is returned in Russian	pass	Course list showed the Russian name and description when Russian locale was active.

Post-condition: Russian translation exists and is retrievable.

7. Request course data with a missing locale and confirm fallback to the default locale

Preconditions: A course exists with only one translation, for example English or Russian

Step	Action	Expected System Response	Pass / Fail	Comment
1	Request the course with an unavailable locale, for example fi	Server responds with course data	pass	Switching UI to Finnish still returned course data.
2	Inspect the response language	Data is returned in the default or available locale	pass	Course data fell back to an available translation and did not fail.

Post-condition: Missing-locale requests fall back to available content.

8. Save and retrieve Arabic or Cyrillic text and verify that UTF-8 works correctly

Preconditions: Teacher is signed in

Step	Action	Expected System Response	Pass / Fail	Comment
1	Create or update a course with Arabic or Cyrillic name and description	Input is accepted without errors	pass	Cyrillic Russian course name and description were entered successfully.
2	Submit the form	Course is stored successfully	pass	Course update completed successfully.
3	Reopen the course or fetch it via API	Text is returned exactly as entered	pass	Cyrillic text was displayed correctly in the course list.

Post-condition: Non-Latin UTF-8 text is stored and retrieved without corruption.

9. Teacher can upload a student list for the course

Preconditions: Teacher is signed in; A course exists; A valid student-list XML file is prepared

Step	Action	Expected System Response	Pass / Fail	Comment
1	Open the course page	Course details are shown	pass	Course and enrollments page opened successfully.
2	Click 'Enrollments'	List of enrolled students is shown	pass	Enrollments page displayed current roster.
3	Click 'Upload enrollments'	File selector opens	pass	Upload enrollments control was available.
4	Select the prepared student-list .xml file	File is selected and listed	pass	Prepared XML file was submitted to the upload endpoint.
5	Confirm the upload	Success message is shown; students appear in the list	pass	Upload returned success and imported students appeared in enrollments.

Post-condition: All students from the XML file are added to the course.

10. Teacher can add one student to the course

Preconditions: Teacher is signed in; A course exists

Step	Action	Expected System Response	Pass / Fail	Comment
1	Open the course list	Courses list is shown	pass	Course list opened successfully.
2	Click 'Enrollments'	List of enrolled students is shown	pass	Enrollments list opened for the selected course.
3	Click 'Add student'	Add-student form is shown	pass	Add student dialog opened.
4	Enter the student's credentials	Input is accepted and submitted	pass	Student first name, last name, and email were accepted.
5	Look at the enrolled students list	The new student appears in the list	pass	Newly added student appeared in the enrollment table.

Post-condition: A single student is added to the course roster.

Summary

Passed steps: 40; Failed steps: 0; Blocked steps: 0. Overall result: accepted in the local UAT environment. All 10 test cases passed after aligning the local database schema with the current application code.
