

No	Heuristic	Description of the Issue	Screenshot	Severity	Suggested Improvement
1	H1-1: Simple & natural dialog	If teacher wants to create a lecture QR code, one must navigate to sub-page, there is no quick button on dashboard		2	Create shortcut link on dashboard suggesting starting a new lecture
2	H1-2: Speak the users' language	Lectures table contains "ID" column which is misleading		1	Remove column entirely as it does not hold any functional value for user
3	H1-3: Minimize users' memory load	Course action buttons have no description, which makes user to remember what they do		3	Add explicit descriptions to action buttons or move them to separate named columns
4	H1-4: Consistency	Not applicable, project uses consistent terminology and graphical solutions			
5	H1-5: Feedback	When new resource is created, system does not explicitly notify user about successful outcome	No screenshot can be made as functionality is absent	2	Add toasts with success message upon resources creation
6	H1-6: Clearly marked exits	When viewing lecture dashboard, the only way to return back is to click menu button / back browser button		1	Provide clear "Back to lectures" button within UI
7	H1-7: Shortcuts	In order to start lecture teacher must first navigate to courses table, find right course and click button		2	Add separate quick dialog to select course and start lecture with one button click
8	H1-8: Precise & constructive error messages	When student tries to attend a lecture one is already attending, system just notifies that attendance already marked		2	Add a button to error message that will lead to the lecture page / automatically navigate student to lecture page

					without error and any duplicated server action
9	H1-9: Prevent errors	System does not validate student emails when they are enrolled by teacher, which makes communication to them impossible		4	All inputs must be validated according to their specifications
10	H1-10: Help and documentation	System lacks any functionality descriptions, readmes or documentation		3	When user first joins system, the terminology may be confusing or unclear. Implement “first sign on” tour / add pop-up descriptions to inputs
